CALIBRATION

Certificate Number: 2697.01 Valid To: June 30, 2024

In recognition of the successful completion of the A2LA evaluation process, accreditation is granted to this laboratory and to the noted satellite locations to perform the following calibrations¹:

Parameter/Equipment	Range	CMC ^{2, 4} (±)	Comments
Viscosity ³ – Kinematic (SVM) (20 to 40) °C	< 10 mm ² /s (10 to 100) mm ² /s (>100 to 1000) mm ² /s (>1000 to 10 000) mm ² /s (> 10 000 to 100 000) mm ² /s	0.25 % 0.33 % 0.42 % 0.55 % 0.63 %	USQ04AW04 or USQ04AW05 — internal calibration procedure Note: calibration typically performed at 40 °C
Rotational 20 °C 25 °C	(1350 to 1650) mPa·s (990 to 1210) mPa·s	13 mPa·s 12 mPa·s	USQ04AW03 – note: calibration typically performed at 20 °C.

Parameter/Equipment Range $CMC^2(\pm)$ Comments	
Density with U-Tube Technology³ – (15 to 40) °C (650 to 1800) kg/m³ 0.05 kg/m³ USQ04AW01 or USQ04AW02 – internal calibration procedure Note: calibration typically performe 20 °C

¹ This laboratory offers commercial calibration service and field calibration service.

² Calibration and Measurement Capability Uncertainty (CMC) is the smallest uncertainty of measurement that a laboratory can achieve within its scope of accreditation when performing more or less routine calibrations of nearly ideal measurement standards or nearly ideal measuring equipment. CMCs represent expanded uncertainties expressed at approximately the 95 % level of confidence, usually using a coverage factor of k = 2. The actual measurement uncertainty of a specific calibration performed by the laboratory may be greater than the CMC due to the behavior of the customer's device and to influences from the circumstances of the specific calibration.

³ Field calibration service is available for this calibration. Please note the actual measurement uncertainties achievable on a customer's site can normally be expected to be larger than the CMC found on the A2LA Scope. Allowance must be made for aspects such as the environment at the place of calibration and for other possible adverse effects such as those caused by transportation of the calibration equipment. The usual allowance for the actual uncertainty introduced by the item being calibrated, (e.g., resolution) must also be considered and this, on its own, could result in the actual measurement uncertainty achievable on a customer's site being larger than the CMC.

⁴ In the statement of CMC, percentages are percentage of reading, unless otherwise indicated.

Accredited Laboratory

A2LA has accredited

ANTON PAAR USA, INC.

Ashland, VA

for technical competence in the field of

Calibration

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017

General requirements for the competence of testing and calibration laboratories. This laboratory also meets R205 – Specific Requirements: Calibration Laboratory Accreditation Program. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system

(refer to joint ISO-ILAC-IAF Communiqué dated April 2017).

Presented this 12th day of April 2022.

Vice President, Accreditation Services
For the Accreditation Council
Certificate Number 2697.01
Valid to June 30, 2024

For the calibrations to which this accreditation applies, please refer to the laboratory's Calibration Scope of Accreditation.
